

ALWAYS ADVANCING

# WORLDWIDE SERVICE

MADE BY PILLER

# PERFECT SERVICE

*Building and delivering high-performance blowers and turbo compressors – that is one thing. Taking care of their trouble-free operation and professional support – that is another! You get both from one source with PILLER. We not only offer competent service, but also provide complete service. Worldwide!*

## **OUR SERVICE – YOUR SUCCESS**

We offer our customers a wide range of first-class services, individually adapted to your requirements, for high-performance blowers and turbo compressors.

Our service is your reliable companion – from commissioning thru maintenance and repairs right up to training.

## **AVAILABLE 24/7**

PILLER Service helps you quickly over the telephone or on site – worldwide. Our service hotline is available to you 24/7 if there are faults or machine standstills.

## **CLOSE TO THE CUSTOMER – WORLDWIDE**

We coordinate deployment of our well trained service technicians worldwide, and try to be as close to our customers as possible. Using high precise measuring equipment, we provide fast help and are always available to provide help.

# PILLER SERVICE FOR YOU

## ASSEMBLY AND COMMISSIONING

Experienced, specialized service technicians support you or assume full responsibility for correct installation of your system. We check the installation and alignment of your blower and provide advice on connecting the ductwork and supply lines. On request we will train your staff and prepare them to operate the machine.

## INSPECTION AND MAINTENANCE

We guarantee the operational reliability and availability of your system by means of regular checks of its actual condition and replacement of wear parts. We document the result, as well as recommendations for preventive measures, in a maintenance log file. Maintenance contracts that have been especially adjusted to your requirements have proven useful here.

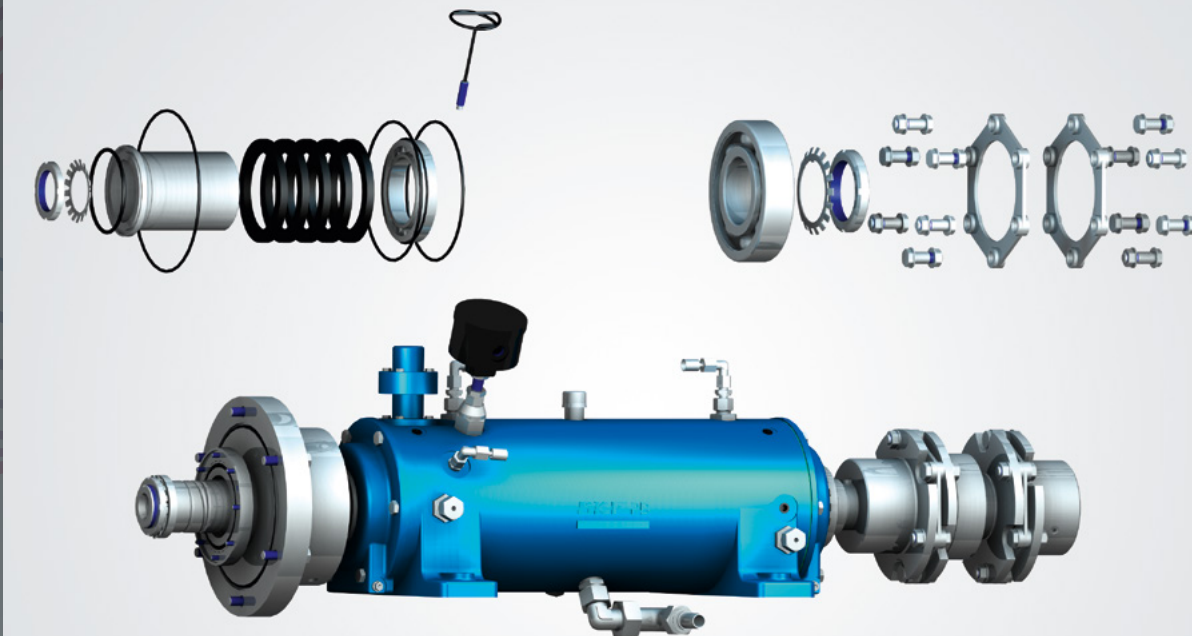

## COSTS EFFECTIVE AND TECHNICAL SYSTEM OPTIMIZATION

Increase the performance or reduce the energy costs and noise emissions – when operating conditions are not optimal, we determine the causes and provide instructions for countermeasures.

The range of our individual system adjustment reaches from minor modifications of the impeller thru a resizing of the complete drive system and the use of VFD's. We update your blowers and turbo compressors to the state of the art.

We would be pleased to help you with the control of your machine in order to optimize your blower economically and technically.

## SPARE PARTS

PILLER delivers the matching spare parts quickly and reliably. Our original spare parts are produced and checked with utmost diligence. A complete quality management system in accordance with DIN ISO 9001 guarantees top quality. Naturally, you can still order spare parts for any machine as long as they are in operation.

We would be pleased to advise you when wear parts need to be replaced and which spare parts or tools have to be provided in order to start repairs immediately in case of damages.

## REPAIRS

Experienced experts with state of the art equipment put your machine into a safe operating condition on site.

Additionally, your blower drives or impellers can be repaired at our factory. Here we have all that is needed in a modern production.

We plan the repair process together with you, and make sure that you will get your parts back as soon as possible.
