

PRESS RELEASE

PILLER is investing double-digit millions in Moringen

Piller Blowers & Compressors GmbH is on a growth path and is driving forward plant development. The company is investing an amount in the low double-digit million range in the construction of an additional workshop, a warehouse and office and social rooms. Preparatory measures will begin in February, construction work in the second quarter of 2024.

[*Moringen, Germany, Dezember 7th, 2023*] Piller Blowers & Compressors GmbH, based in Moringen, Northeim district, has been on a growth path in recent years. “After around 77 million euros in 2021, we achieved sales of 97.3 million euros last year. We also recorded a record order intake of 125 million euros,” says Stephan Merkel, who manages the company’s business together with Christoph Böhnisch. At the Moringen location alone, 52 new jobs were created this year and 11 new trainees were hired. The continued high demand for PILLER’s customized high-performance blowers and compressors for the process industry indicates continued growth.

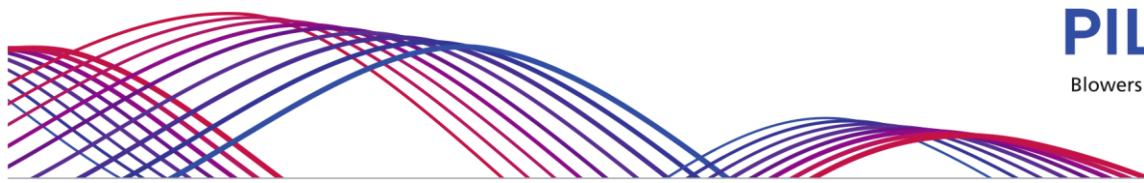

“The construction project makes our success story visible to the outside world and is a clear commitment to the Moringen location. Moringen is and remains our central location,” emphasizes PILLER CEO Christoph Böhnisch. “We are investing a sum in the low double-digit million euro range to expand our production capacities and thus secure existing jobs in the long term and create new ones.”

Work starts in February

After successful discussions with banks and extensive planning, the old administration building and a scrapyard with all the buildings on it at the eastern end of the company property will be demolished in February 2024 as the first step. Before the demolition, PILLER makes the old administration building available to the Moringen volunteer fire department for a realistic exercise.

The construction project includes a covered transfer path that will connect the existing with the new workshop, a new warehouse with a floor area of 1919 m², as well as an additional workshop with a floor area of 4947 m². Adjacent to the factory hall, office space, social rooms and rooms for customer acceptance will be built with a view of the factory hall. A new canteen will probably also be built in a second construction phase.

The building application for this extensive construction project has already been submitted. Mathias Albrecht from Albrecht + Weisser Architekten in Northeim, who is accompanying PILLER as an architect, assumes that building permits will be issued around March. Construction is scheduled to start at the end of April or beginning of May next year. The construction period for the

halls will take approximately until the end of 2024 and the entire project will be completed by the end of the first quarter of 2025.

About Piller Blowers & Compressors

Piller Blowers & Compressors GmbH, based in Moringen, develops, designs, and manufactures customer-specific high-performance blowers and compressors for the process industry. The roots of the family business go back to 1909.

With completely individual designs or suitably configured machines from the modular product portfolio, PILLER delivers efficient and economical solutions to customers from many industries, including the food industry, pulp and paper production, the chemical industry, the petrochemical industry, the pharmaceutical industry, or industrial wastewater treatment. PILLER supports customers with innovative technology for heat recovery on the way to a resource-efficient production. The high-performance blowers and compressors for mechanical vapor recompression (MVR) and steam regeneration processes significantly increase energy efficiency, reduce the spendings for primary energy, and lead to CO₂ savings in the processes. In ongoing installations, up to 75 percent reduced energy consumption, over 60 percent reduced CO₂ emissions and up to 90 percent energy cost savings have been proven in industrial heat pump processes. In addition, PILLER offers blowers for the CCR platforming process, process gas blowers, and hot-gas circulators for industrial furnaces. Comprehensive services – expert advice, commissioning, maintenance, and servicing – round off the offer.

With more than 100 years of experience and continuous investment in research and development, PILLER is working to push the boundaries of the already high efficiencies, power availability, and long running times of its machines to permanently maintain and constantly expand its global technological leadership in high-performance blowers and compressors.

With 453 employees and branches in the USA, Singapore, and China as well as joint ventures in Korea, India, and Brazil, PILLER is now internationally positioned and exports 85 percent of its products. Group sales in 2022 amounted to EUR 97.3 million.
